

GREENCELLS GROUP STRENGTHENS UK PRESENCE WITH NEW 68.48 MWP EPC CONTRACT IN CAMBLESFORTH

Saarbrücken, 14 May 2025 – The Greencells Group has signed a new EPC and O&M contract with British energy company Enray Power for a large-scale solar project in Camblesforth, United Kingdom. With a capacity of 68.48 MWp, this marks another milestone in Greencells’ long-standing presence in the UK market.

Since entering the British market in 2014, Greencells has delivered nearly 50 projects across the country – with a total installed capacity of over 500 MWp. The Camblesforth project adds significantly to this track record and includes not only engineering, procurement and construction services, but also the long-term operation and maintenance of the site.

As part of the project, a 25.15 MWh battery energy storage system (BESS) will be integrated to enable 10 MWac of flexible grid injection over a two-hour period – increasing the project’s grid value and long-term performance.

The inclusion of BESS underlines Greencells’ ability to deliver smart, system-based solutions tailored to tomorrow’s energy needs. During Intersolar Europe in Munich, the CEOs Fabian Herr (Greencells Group) and Philip Price (Enray Power) met in person to align on final project details and reaffirm their joint commitment to the UK market and its future potential.

“With Camblesforth, we continue a decade of successful project execution in the UK – and take another step toward integrated, future-ready infrastructure,” says Fabian Herr, CEO of Greencells Group.

ABOUT GREENCELLS GROUP:

The Greencells Group, headquartered in Saarbrücken | Germany, is an international EPC service provider specializing in the construction and maintenance of utility-scale solar power plants.

Founded in 2009, the company is considered a pioneer in the field of renewable energies. It is strongly committed to sustainability and the promotion of emission-free energy and is dedicated to a cleaner and greener future.

Greencells offers turnkey solutions for the construction of large-scale solar power plants, including planning, procurement, installation, commissioning, operation and maintenance.

With over 3.2 GW of installed capacity worldwide, a track record of 179 completed Projects worldwide and over 300 employees, the company is one of the largest solar energy groups in Europe.
